

	GENERAL DOCUMENTS	Code	Rev.
	QUALITY POLICY	QM-002	03

MISSION

To facilitate our clients' production processes by providing innovative solutions based on our gas treatment technologies, delivering a solution tailored to each project and increasing the profitability of their businesses through efficient machinery and sustainable processes. All of this contributes to a positive environmental and societal impact by reducing emissions and promoting environmentally responsible industrial practices.

VISION

GasN2 aims to become a global reference company in the field of gas consumption, integrating the entire product lifecycle: from conceptual design to maintenance and after-sales services.

VALUES

Sustainability, efficiency, circular economy, energy savings, materials engineering, cost reduction, ease of use, minimal logistics, social inclusion and integration... These are some of the characteristics GasN2 seeks in its products and services. Globally, the company develops technologies that are easy to implement and that add value to production processes while keeping them respectful of the natural environment.

This Quality Policy establishes the principles and commitments of GasN2Itrogen S.L. to ensure that our products and services consistently meet our customers' requirements, as well as regulatory and legal requirements, in accordance with the international standards ISO 9001:2015 and ISO 13485:2016 applicable to devices placed on the market and manufactured by the company, including medical devices. Consequently, in order to monitor the organization's achievements, GasN2 has implemented a Quality Management System (QMS), designed to plan, control, and improve all the elements necessary to achieve these objectives. In this regard, the company and its Management are firmly committed to maintaining the effectiveness of the QMS, providing the resources required to maintain and improve it, ensuring that the system is communicated and understood throughout the organization, and periodically reviewing its validity and suitability.

Furthermore, GasN2, as an organization committed to the highest standards of regulatory compliance, has developed and implemented a Compliance System that defines the principles and guidelines governing the company's activities. It also establishes the procedures and policies necessary to ensure the proper functioning of this system.
